Professional Experience

Software Developer Intern

January 2022 - August 2022

24G, Troy MI

- Served as the sole frontend developer on 4 experiential activations, coordinating directly with the Experiential Team Lead to take Vue.js interfaces from UI mockup to deployed production within 2–4 weeks each.
- Developed interactive expo activations for major brands including Salesforce, Waymo, and Essilor Luxottica.
- Created the Oakley expo activation that Essilor Luxottica named their favorite of 4 experiences at the event, delivered as the first client assignment of the internship.
- Implemented Pinia store and Vue Router patterns during the frontend team's Vue 2-to-Vue 3 migration.
- Built a full-featured analytics dashboard UI for an internal expo reporting tool, including data display and CSV export, that remained in active company use following the internship.

Projects

Job Search Facilitator - [Demo Video](#) | [Repository](#)

July 2026 - Present

Technologies Used - Codex, TypeScript, Vue, Node, Docker, Prisma, Pinia, Zod, Vitest, Express, Postgres, Sass

- Built a full-stack TypeScript monorepo with Vue 3/Pinia interfaces, an Express 5 API, shared Zod contracts, and Prisma/PostgreSQL persistence.
- Created end-to-end review, application, outreach, and tracking workflows for ranked roles, application files, contacts, message drafts, and follow-ups.
- Integrated Codex and Chrome through a Node bridge with JSON Schema validation, SSE streaming to the Vue client, and user approval prompts.

Tally Tracker - [Demo Video](#) | [Repository](#)

January 2026 - Present

Technologies Used - React Native, Typescript, Expo, Node, Express, Socket.IO, Prisma, Zod, Cypress, Vitest

- Built a cross-platform React Native interface for personal and shared counters with deep-link invitations and immediate updates across web and native clients.
- Delivered an offline-first experience with optimistic UI, a durable command queue, background sync, and server-side idempotency across outages and restarts.
- Implemented rotating access and refresh tokens with HTTP-only cookies for web and Bearer tokens for native, plus automatic retry and concurrent refresh de-duplication.

Reaction - [Live Site](#) | [Demo Video](#) | [Client Repository](#) | [Server Repository](#)

September 2025 - December 2025

Technologies Used - Vue, Pinia, Sass, GSAP, Node, Express, Sequelize

- Built a Vue 3/Pinia reaction-time training app with configurable drills, animated feedback, recent results, profile history, and GSAP-driven transitions.
- Developed the Express/PostgreSQL API and Sequelize data layer for accounts, game results, statistics, and per-attempt settings.
- Connected cookie-based JWT authentication, rate limiting, and per-attempt settings snapshots to secure accounts and support filtered performance history.

Technical Skills

Languages - TypeScript, JavaScript (ES6+), SQL, Python, Java, C/C++

Engineering - Full-Stack Web Development, Frontend Architecture, REST API Design, State Management, Authentication & Authorization, Real-Time Systems, Offline-First Architecture, Automated Testing, CI/CD

Technologies - Vue, React Native, Expo, Node.js, Express, Socket.IO, PostgreSQL, Prisma, Docker

Education

Central Michigan University, Mount Pleasant MI

Graduation: August 2023

Bachelor of Science in Computer Science, Minor in Mathematics
