Professional Experience

Software Developer Intern

January 2022 - August 2022

24G, Troy MI

- Delivered four Vue.js expo interfaces as the sole frontend developer for Salesforce, Waymo, and Essilor Luxottica, coordinating with the Experiential Team Lead to take each interface from mockup to production.
- Designed and implemented custom page transitions beyond the supplied mockups for Oakley's Vue.js interface, coordinating with the design team to adapt supporting assets.
- Delivered the frontend for an Oakley expo activation that Essilor Luxottica named its favorite of four event experiences and expressed intent to reuse with better placement to increase visibility and participation.
- Owned Campaign Manager's reporting interface and contributed to its API integration. The internal event-reporting tool remained in active company use after the internship.

Projects

Tally - [Demo Video](#) | [Repository](#)

January 2026 - Present

Technologies Used - TypeScript, React Native, Expo, Node, Express, Socket.IO, PostgreSQL

- Developed a cross-platform React Native app with personal and shared counters, deep-link invitations, and real-time synchronization across web, iOS, and Android.
- Implemented an offline-first architecture with a durable command queue, reliable background sync, and server-side idempotency that powers a consistent optimistic UI across outages and restarts.
- Implemented access/refresh token auth with rotation and dual delivery (HTTP-only cookies for web, Bearer tokens for native) including automatic refresh/retry and concurrent refresh de-duplication in the API client.

Job Search Facilitator - [Demo Video](#) | [Repository](#)

July 2026 - Present

Technologies Used - TypeScript, Vue, Node, Express, PostgreSQL, Prisma, Codex

- Built a local job-search platform that converts AI-sourced leads into prioritized review, application, outreach, and tracking workflows, centralizing the path from discovery through follow-up.
- Implemented reusable multi-panel layouts, accessible controls, and Pinia state that preserve filters, selections, and active Codex tasks across navigation and reloads.
- Developed a host-side Node bridge for Codex app-server that validates structured outputs and streams task progress and browser-origin approval requests to the client over SSE, giving users live visibility and control.

Reaction - [Live Site](#) | [Demo Video](#) | [Repository](#)

September 2025 - December 2025

Technologies Used - Vue, Pinia, Sass, GSAP, Node, Express, Sequelize

- Built a configurable reaction-time game that persists player settings and completed runs, giving users comparable score, duration, and difficulty history across sessions.
- Integrated Vue and Pinia state with an Express and Sequelize API, synchronizing authentication, settings, recent games, and aggregate stats across game and profile views.
- Preserved each run's original conditions with settings snapshots, then delivered sortable, paginated, multi-filter history for meaningful performance comparisons.

Technical Skills

Languages - TypeScript, JavaScript, SQL

Frontend - Vue 3, Pinia, React Native, Expo, Sass

Backend & Data - Node.js, Express, Socket.IO, PostgreSQL, Prisma, Sequelize, Zod

Testing & Delivery - Vitest, Cypress, Playwright, Supertest, Docker, GitHub Actions

Education

Central Michigan University, Mount Pleasant MI

Graduation: August 2023

Bachelor of Science in Computer Science, Minor in Mathematics
